Benchmarking of existing security programs against legal & industry best practice standards

Security Operational Review

Security policy/procedures review, operational security audits, value engineering (Op-ex/Cap-ex)

Business and Workplace Crime Prevention

CPTED audits, business crime risk assessments

Technical Security Consulting

CCTV system design, review and optimization

We Can Help....

The design and implementation of a security program in any environment presents a unique set of challenges. Which standards should the program align with? What is the right blend of personnel, hardware, procedures and systems? How many security staff are required and to what level should they be trained? Is CCTV justified and if so, how many cameras are required in which areas?

Organizations have a legal duty of care to take reasonable steps to maintain a safe operating environment. In order to meet this standard, an organization is in a far stronger position if it can show that an assessment was conducted and the security program meets legal/industry standards.

The **David Hyde and Associates** team has been involved in the design, review and development of security programs at some of Canada's highest profile landmarks. Our experience equips us with the tools and abilities to ensure our clients can reduce overall risk exposure and optimize return on their security program investment.

We Optimize Security Programs....

David Hyde and Associates supports clients with all aspects of security program review and development:

When things go wrong, one of the first questions asked is, "Was there enough security?" Research suggests that many security programs are not optimized. An all-too-common problem is an over-reliance on a single program component such as CCTV.

Other common security program weaknesses include misalignment with business objectives and a lack of conformance with legal and industry standards.

At **David Hyde and Associates** we utilize only proven methods and tools in security program evaluation and design. The services we offer integrate and converge physical, procedural, personnel and technical security measures into a single, manageable solution.

Our diverse team has unrivalled experience in security program development. All of our security program

solutions are risk-proportionate and based on legal standards and industry best practice.

Please call today to find out how **David Hyde & Associates** can help to optimize your security program, safeguarding your business operations and hard-earned reputation.
